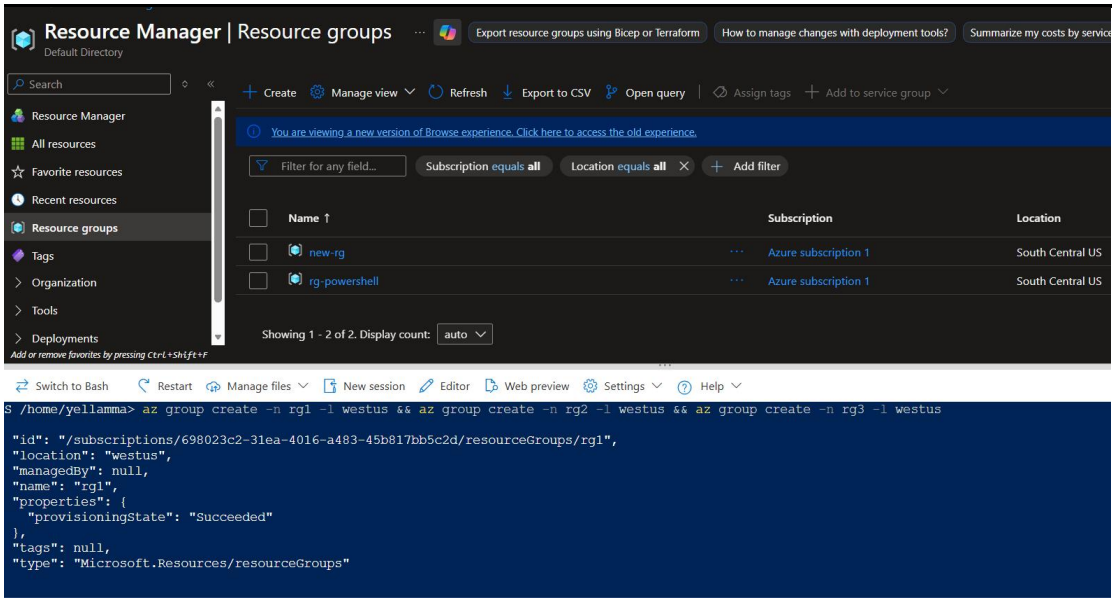
Tasks To Be Performed:

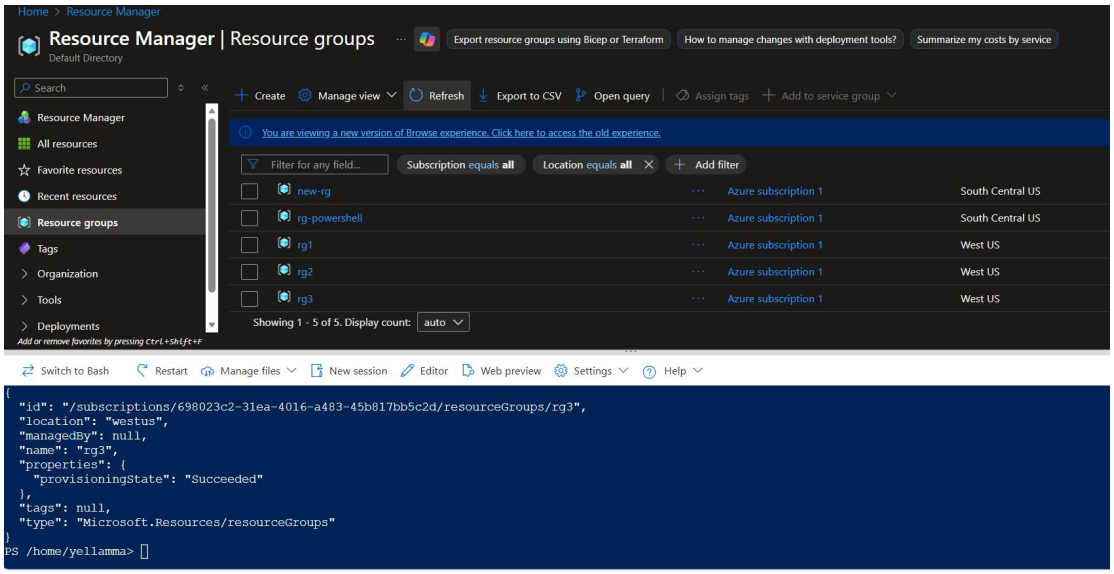
Use Azure CLI and Azure PowerShell to:

1. Create three more resource groups in a specific region. For example: "West US"
2. List all resource groups in West US

Azure CLI and Azure PowerShell to:

1. Create three more resource groups in a specific region. For example: "West US"



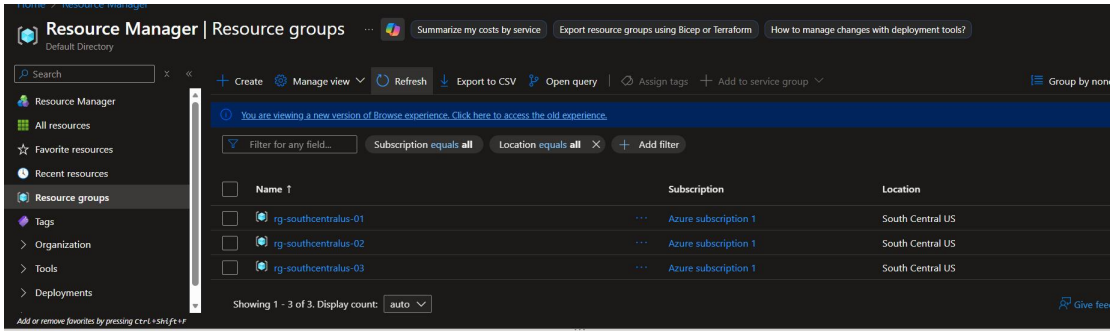


Create Resource Groups In South Central US

Switch to PowerShell | Restart | Manage files | New session | Editor | Web preview | Settings | Help

```
Requesting a Cloud Shell.Succeeded.
Connecting terminal...

Your Cloud Shell session will be ephemeral so no files or system changes will persist beyond your current session.
yellamma [ ~ ]$ az group create --name rg-southcentralus-01 --location "southcentralus" &&
az group create --name rg-southcentralus-02 --location "southcentralus" &&
az group create --name rg-southcentralus-03 --location "southcentralus"
{
  "id": "/subscriptions/698023c2-31ea-4016-a483-45b817bb5c2d/resourceGroups/rg-southcentralus-01",
  "location": "southcentralus",
  "managedBy": null,
```



2. List all resource groups in West US

```
PS /home/yellamma> az group list --query "[?location == 'westus']" -o table
Name    Location
------  ----------
rg1     westus
rg2     westus
rg3     westus
PS /home/yellamma>
```

List all resource groups in South Central US

Switch to PowerShell | Restart | Manage files | New session | Editor | Web preview | Settings | Help

```
  "tags": null,
  "type": "Microsoft.Resources/resourceGroups"
}
yellamma [ ~ ]$
az group list --query "[?location=='southcentralus'].name" --output table
Result
-------------------
rg-southcentralus-01
rg-southcentralus-02
rg-southcentralus-03
yellamma [ ~ ]$
```
