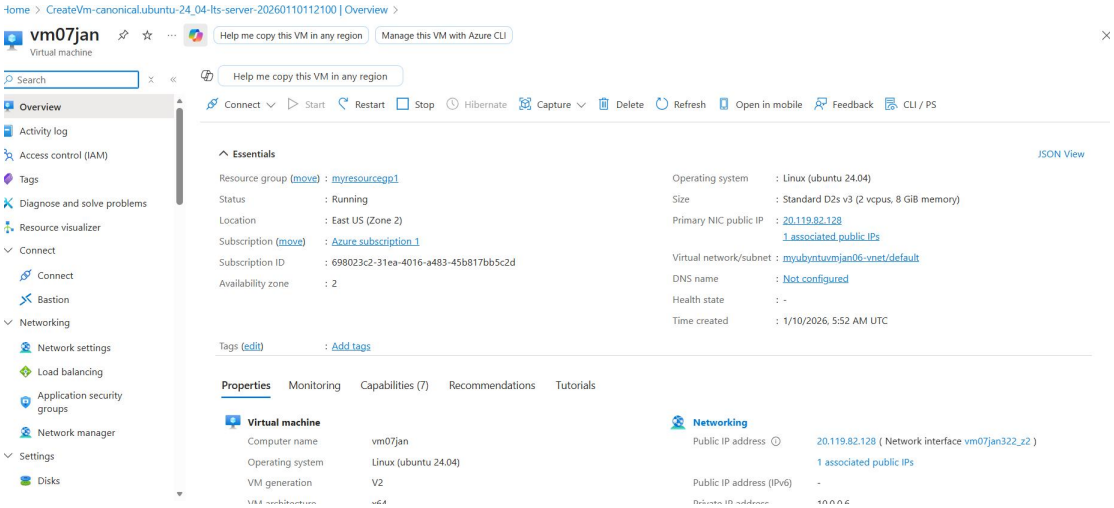
Tasks To Be Performed:

1. Install a Docker using VM
2. Pull hshar/webapp (https://hub.docker.com/r/hshar/webapp) repository
3. Create a new file in this repository

---

1. Install a Docker using VM



```
Created symlink /etc/systemd/system/sockets.target.wants/docker.socket → /usr/lib/s
Processing triggers for dbus (1.14.10-4ubuntu4.1) ...
Processing triggers for man-db (2.12.0-4build2) ...
Scanning processes...
Scanning linux images...

Running kernel seems to be up-to-date.

No services need to be restarted.

No containers need to be restarted.

No user sessions are running outdated binaries.

No VM guests are running outdated hypervisor (qemu) binaries on this host.
azureuser@vm07jan:~$ docker -v
