Tasks To Be Performed:

1. Create a virtual network in West US
2. Create another virtual network in South India
3. Deploy virtual machine in West US with the virtual network in West US
4. Deploy virtual machine in South India inside virtual network in South India
5. Create VNet-VNet peering to connect West US and South India VM
6. Check this by pinging VM1 to VM2 via ping command using private IP address

---

1. Create a virtual network in West US

Create a virtual machine ··· Help me choose the right VM size for my workload | Help me create a low cost VM

Validation passed

Help me create a low cost VM | Help me create a VM optimized for high availability | Help me choose the right VM size for my

Basics

Subscription	Azure subscription 1
Resource group	myresourcegp1
Virtual machine name	vm1
Region	West US
Availability options	No infrastructure redundancy required
Zone options	Self-selected zone
Security type	Trusted launch virtual machines
Enable secure boot	Yes
Enable vTPM	Yes
Integrity monitoring	No
Image	Ubuntu Server 24.04 LTS - Gen2
VM architecture	x64
Size	Standard D2s v3 (2 vcpus, 8 GiB memory)
Enable Hibernation	No
Authentication type	Password
Username	azureuser
Public inbound ports	SSH

Validation passed

Help me create a low cost VM | Help me create a VM optimized for high availability | Help me choose the right VM size for my workload

Networking

Virtual network	(new) vnet
Subnet	(new) default (10.1.0.0/24)
Public IP	(new) vm1-ip
Accelerated networking	On
Place this virtual machine behind an existing load balancing solution?	No
Delete public IP and NIC when VM is deleted	Disabled

Management

Microsoft Defender for Cloud	None
System assigned managed identity	Off
Login with Microsoft Entra ID	Off
Auto-shutdown	Off
Enable periodic assessment	Off
Enable hotpatch	Off
Patch orchestration options	Image Default

2. Create another virtual network in South India

Home > Compute infrastructure | Virtual machines >

Create a virtual machine

Help me choose the right VM size for my workload | Help me create a low cost VM | Help me create a VM optimized for high availability | Help me

Create new

Subnet * (new) default (10.0.0.0/24)

Public IP (new) vm2-ip

Create new

Public IP addresses have a nominal charge. Estimate price

NIC network security group: None / Basic / Advanced

Public inbound ports *: None / Allow selected ports

Select inbound ports *: SSH (22)

This will allow all IP addresses to access your virtual machine. recommended for testing. Use the Advanced controls in the Netw create rules to limit inbound traffic to known IP addresses.

Delete public IP and NIC when VM is deleted

Create virtual network

The Microsoft Azure Virtual Network service enables Azure resources to securely communicate with each other in a virtual network logical isolation of the Azure cloud dedicated to your subscription. You can connect virtual networks to other virtual networks, or y premises network. Learn more

Name * vnet2

Address space

The virtual network's address space, specified as one or more address prefixes in CIDR notation (e.g. 192.168.1.0/24).

Address range *	Addresses	Overlap
10.0.0.0/16	10.0.0.0 - 10.0.255.255 (65536 addresses)	None
	(0 Addresses)	None

Subnets

The subnet's address range in CIDR notation. It must be contained by the address space of the virtual network.

Subnet name	Address range	Addresses
default	10.0.0.0/24	10.0.0.0 - 10.0.0.255 (256 addresses)
		(0 Addresses)
